

Energy Policy

We, at Nava Limited (**“Nava”**), producing Ferro alloys and generating Power, are committed to achieve excellence in energy conservation in all our activities.

We will fulfil this commitment through:

- Close and continuous monitoring of energy consumption at every point of use;
- Adoption of energy efficient technologies and continual improvement in our manufacturing and support processes to reduce energy consumption;
- Setting objectives and targets and reviewing actual performance through internal and external audits for continual improvement in energy efficiency;
- Ensuring availability of information and resources to achieve the above objectives and targets;
- Compliance with legal and other requirements applicable to energy use, consumption and efficiency;
- Creating awareness and imparting training at various levels of management to facilitate identification and implementation of appropriate energy management methodologies;
- Considering energy efficiency in procurement of materials and services;
- Encouraging utilization of renewable energy wherever feasible;
- Deployment of this energy policy at all levels of the organization and making it available to the stakeholders; and
- Instilling a sense of duty in every employee towards energy conservation and recognizing and rewarding energy conservation initiatives taken by the employees.
